## Who I am?

Hello! I'm a product designer focused on turning complex, intimidating products into calm, clear and genuinely usable experiences. Over the past few years I've designed fintech, health and crypto apps end to end — from research and user flows to polished UI, motion and developer handoff. I care about the small details that make an interface feel effortless, and I work closely with product and engineering to ship designs that hold up in the real world, not just in the mockup.

## Education

Two degrees, two completely different worlds — tech innovation and IP law — and somehow both turned out to be exactly what I needed. One taught me how ideas become products; the other taught me how to protect and own what you build.

**ITMO UNIVERSITY**
Technology Management and Innovation
2020-2024

**ITMO UNIVERSITY**
Strategic Management of Intellectual Property
2024-2026

## Languages

Learning languages is one of my favourite habits — it's the fastest way to actually understand a culture instead of just passing through it. Every new language quietly rewires how I think and what I notice.

Three is not my finish line. Russian and English feel like home, Spanish is almost there, and French is next on the list — I really don't plan to stop counting.

| | |
|---|---|
| **Russian Language**<br>Since 2002 - Now | C2 |
| **English Language**<br>Since 2009 - Now | B2 |
| **Spanish Language**<br>Since 2022 - Now | A2 |

## Hard Skills

This is the part where I list the things I can actually do at 2 a.m. when the deadline is tomorrow and the "quick change" turned out to be a full redesign. These are the tools and craft I reach for every day — the stuff that turns a vague "make it pop" into an interface people can actually use. I've spent years pushing pixels until they behave, wrangling design systems so nothing drifts, and prototyping interactions that feel right before a single line of code is written.

- UX/UI Design
- Prototyping
- Product Design
- Design Systems
- User Research
- Usability Testing
- Component Libraries
- Motion Design

## Soft Skills

Hard skills get you the mockup; soft skills get it actually shipped without anyone rage-quitting the group chat. This is how I work with real humans — translating "the client wants it more premium" into concrete decisions, defending a design without turning it into a duel, and explaining why behind every choice so the whole team is rowing in the same direction.

- Critical Thinking
- Mentorship
- A good sense of humor
- Clear Communication
- Stakeholder Management
- Adaptability

@vlad_forget
Yes, I work under an alias — Vlad Forget — not because I'm hiding, but because a good name is just another piece of product design.
Product Designer 🇦🇪 UAE, Abu Dhabi

## Work Exprerience

Here's a look at where I've worked and what I've built. Across agencies, in-house teams and freelance, I've grown from UX/UI designer to senior product designer — owning bigger parts of the process each step, from single screens to full products and design systems.

**Senior Product Designer**
March 2026 - Now

I own the end-to-end design process for key product features, from discovery and research through to final UI. I define design strategy, mentor other designers, and partner with product and engineering to turn business goals into clear, data-informed design decisions.

**Middle Product Designer**
May 2025 - March 2026

I designed user flows, wireframes and high-fidelity screens for core product features, and worked side by side with developers to ship them accurately. I contributed to the design system and turned analytics and user feedback into concrete improvements to the main user journeys.

**Product Designer**
September 2024 - May 2025

I designed the digital ordering platform for a medical-equipment supplier — a catalogue, product configurator and B2B checkout used by clinics and hospital procurement teams. I translated complex purchasing flows (quotes, bulk orders, certificates and compliance) into clear interfaces and built dashboards for order tracking and equipment servicing.

**Product Designer**
December 2023 - September 2024

I delivered end-to-end product design for clients across web and mobile — research, wireframing, UI and interactive prototypes. I ran the full project cycle independently, from scoping and estimates to handoff, and built compact design systems so clients could scale consistently.

**Middle UX/UI Designer**
August 2022 - December 2023

I designed interfaces and user flows for web applications, running research and usability testing to guide decisions. I maintained the company's design system and collaborated with developers, product managers and QA to keep design consistent and features shipping smoothly.

**UX/UI Designer**
November 2021 - August 2022

I created wireframes, mockups and prototypes for a range of client projects, learning and applying core UX principles on real products. I worked directly with clients to understand their goals and iterated on designs until each product had a clear, consistent style.

## Weapons Of Choice

I work across a broad toolkit — every app below is part of my everyday process, from research and design to motion and handoff.

My signatures are Figma, After Effects and Photoshop — where I design interfaces, bring them to life and polish every detail.
